Valluvar Kottam High Road, Nungambakkam, Chennai - 600034

INTRODUCTION

The Attendance Incentive Management Software (AIMS) is designed to maintain employee attendance and reward them with incentives as per the Chittaranjan Pattern incentive (CLW) scheme (hourly based rates) which is followed in Indian Railway Workshops. The software tracks and records raw material management, production progress, quality of production and dispatch cycle.

EFFECTIVE MONITORING
Real-time status of the production process

PRODUCTIVITY
procurement and production planning

ACCURACY
99% accuracy in delivery schedules

The AIMS software is integrated with biometric devices unified at each shop for registering the entry (punch-in) and the exit (punch-out) time of all employees. The tripod turnstile gates are activated through the biometric feed thus ensuring that all the employees' / visitors' entry and exit are recorded.

A barcode scanner is integrated to read the job cards. Data feed from these devices is auto-transmitted into the software for tracking work-flow through the production stages. This application is suitable for discrete manufacturing.

The software registers all the demands raised for products and components, and helps to plan the manufacturing schedule across the different departments in a S&T workshop. This allows real-time monitoring of the manufacturing process and on-time delivery of products.

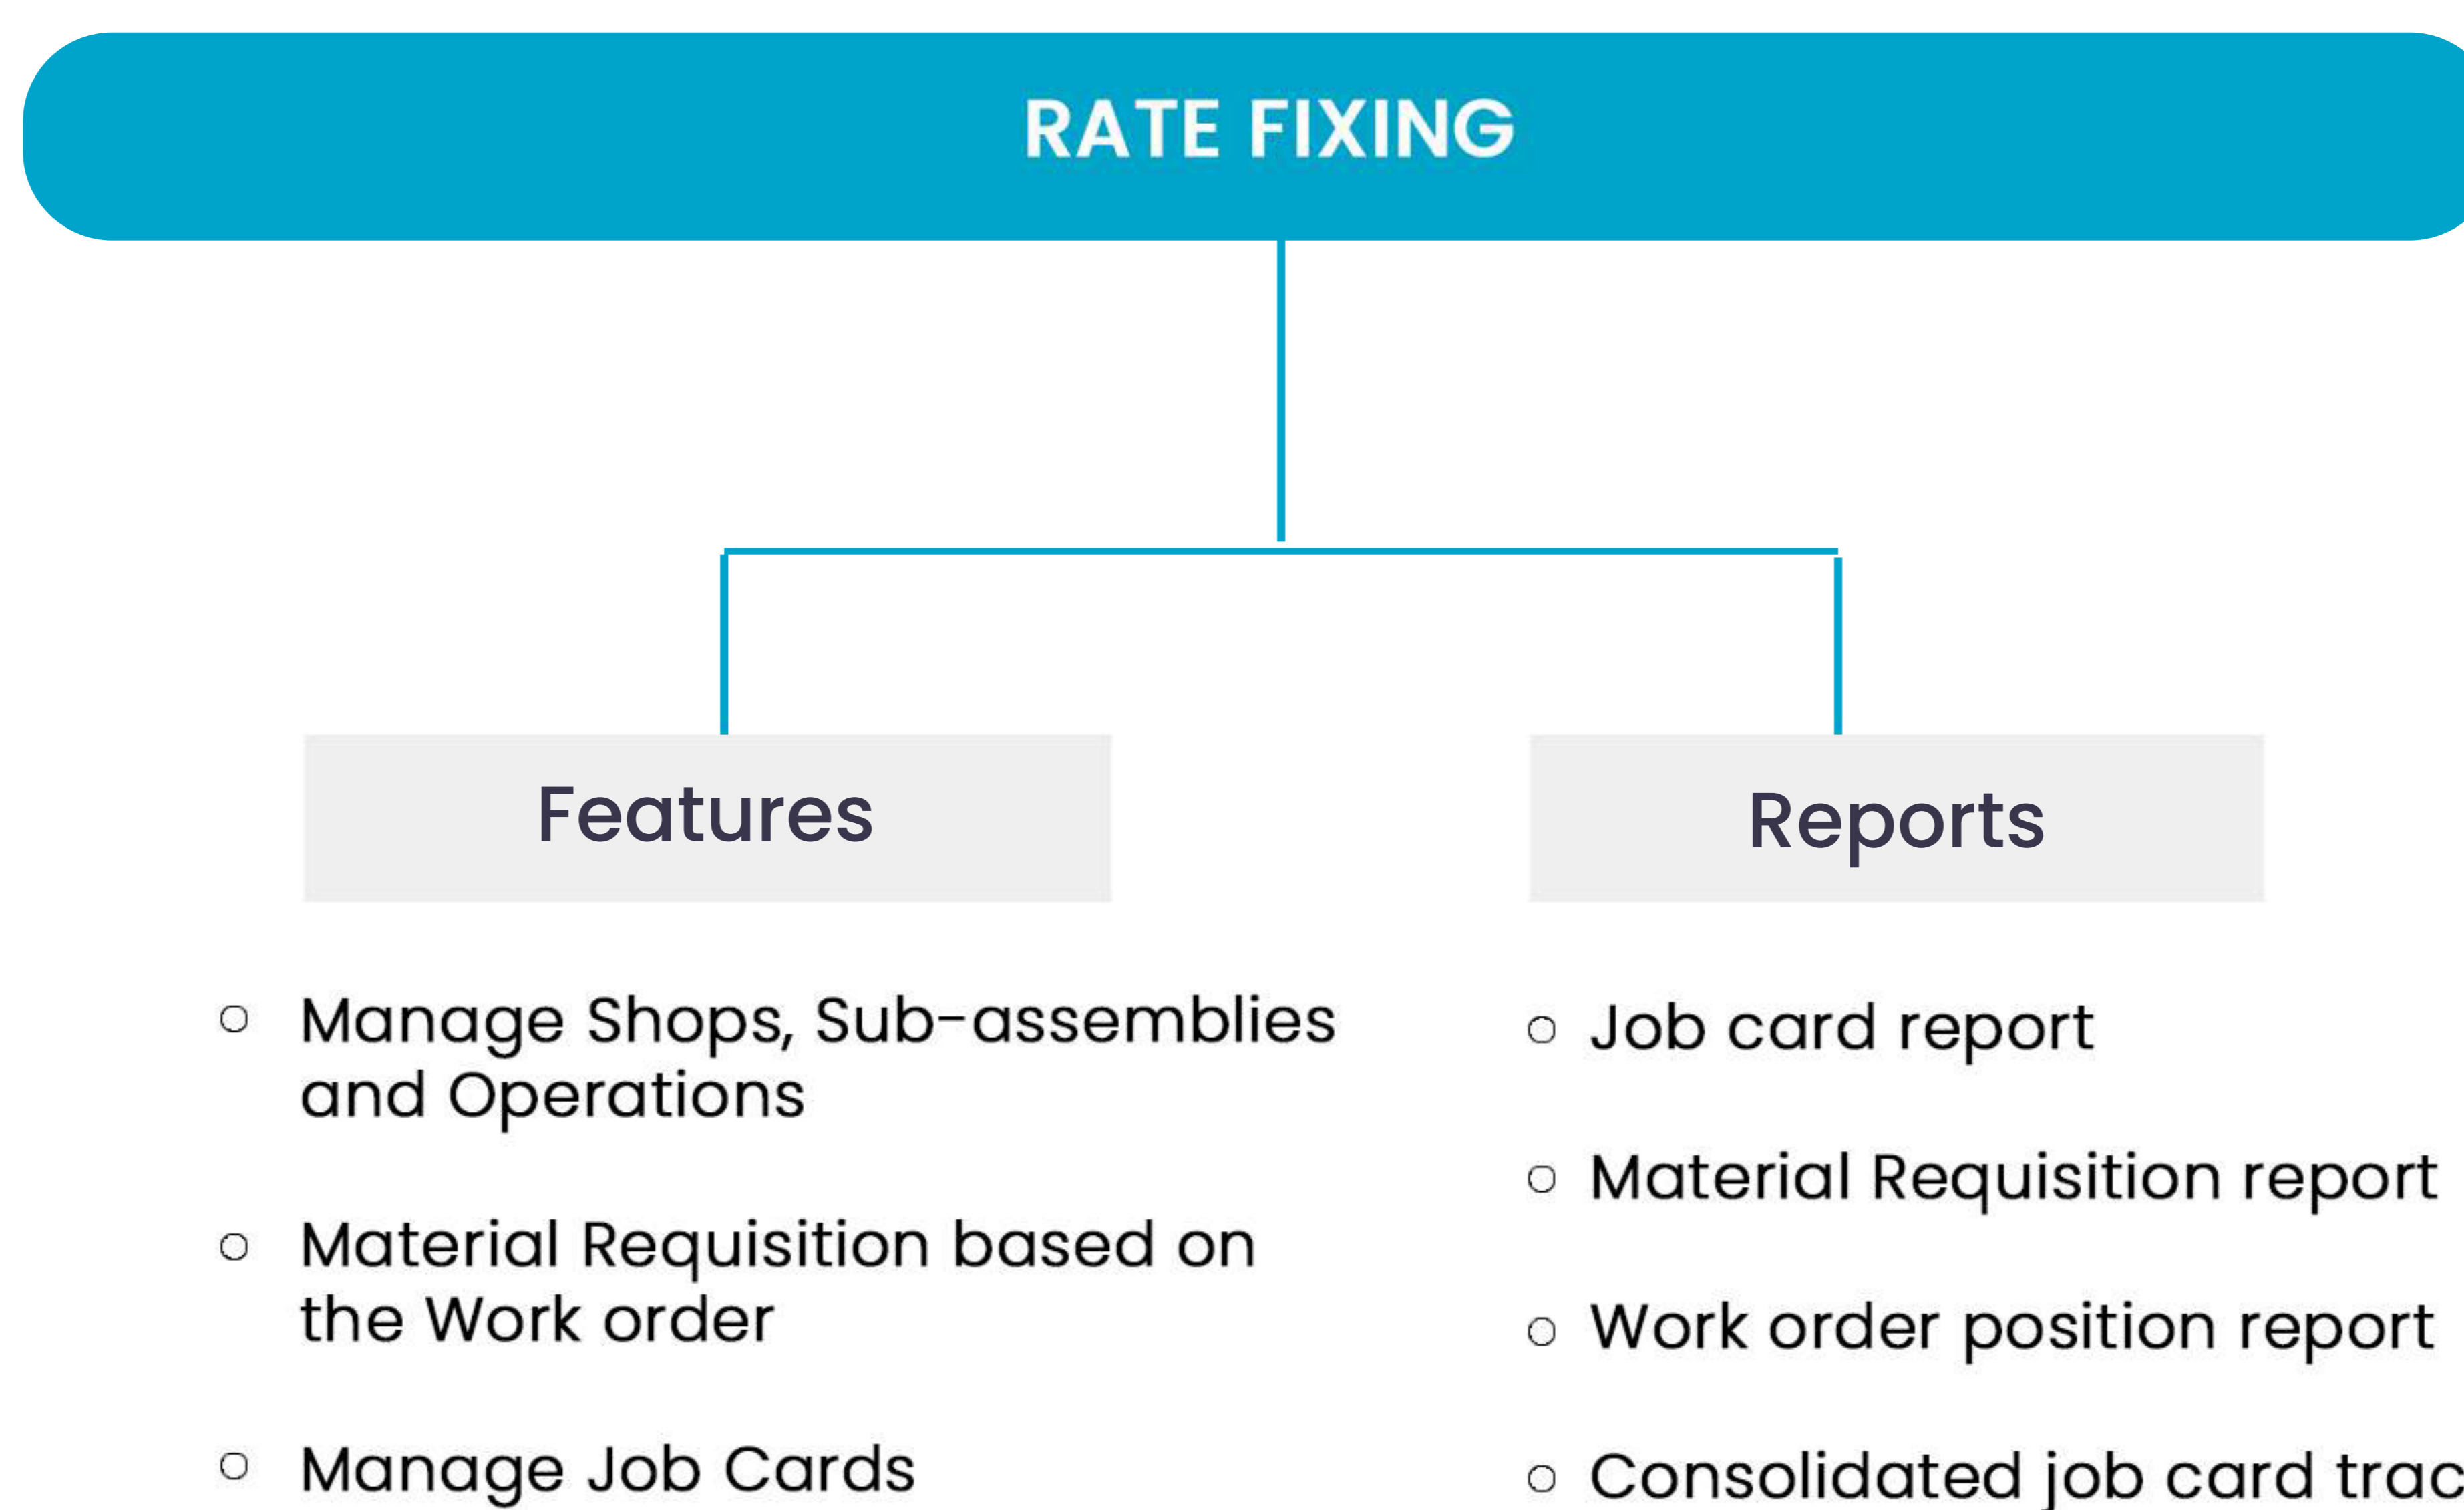

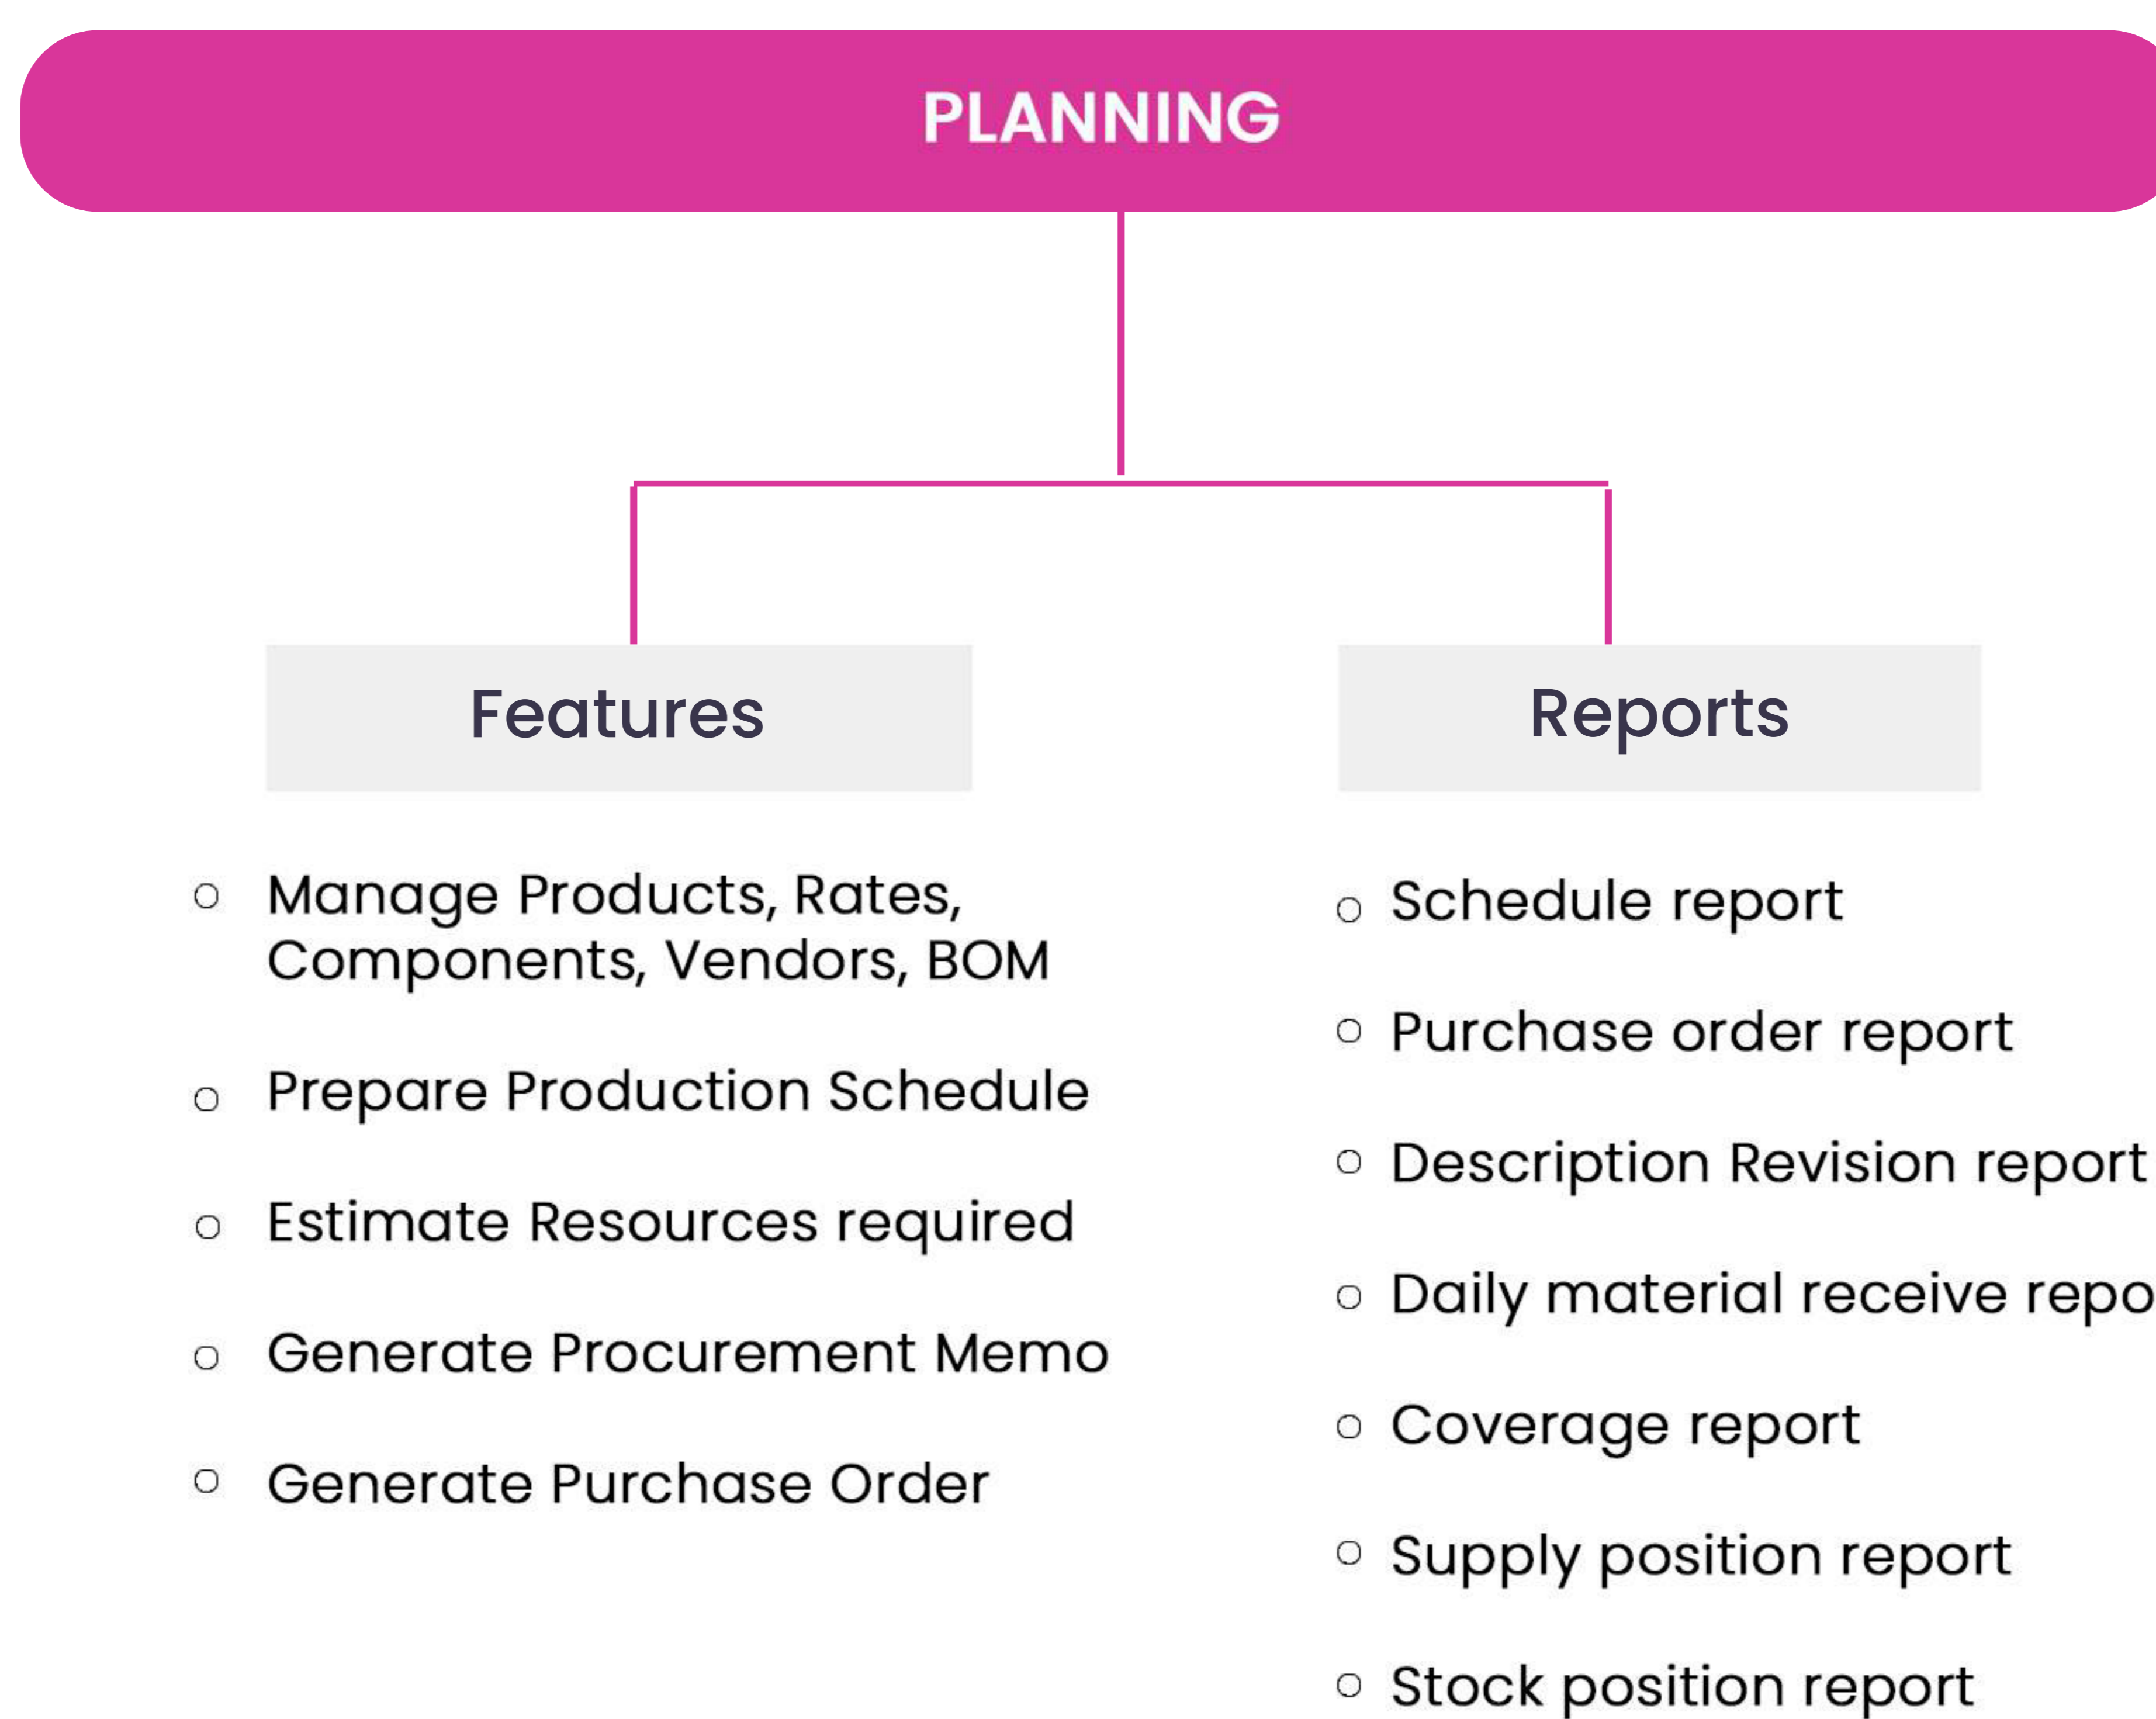

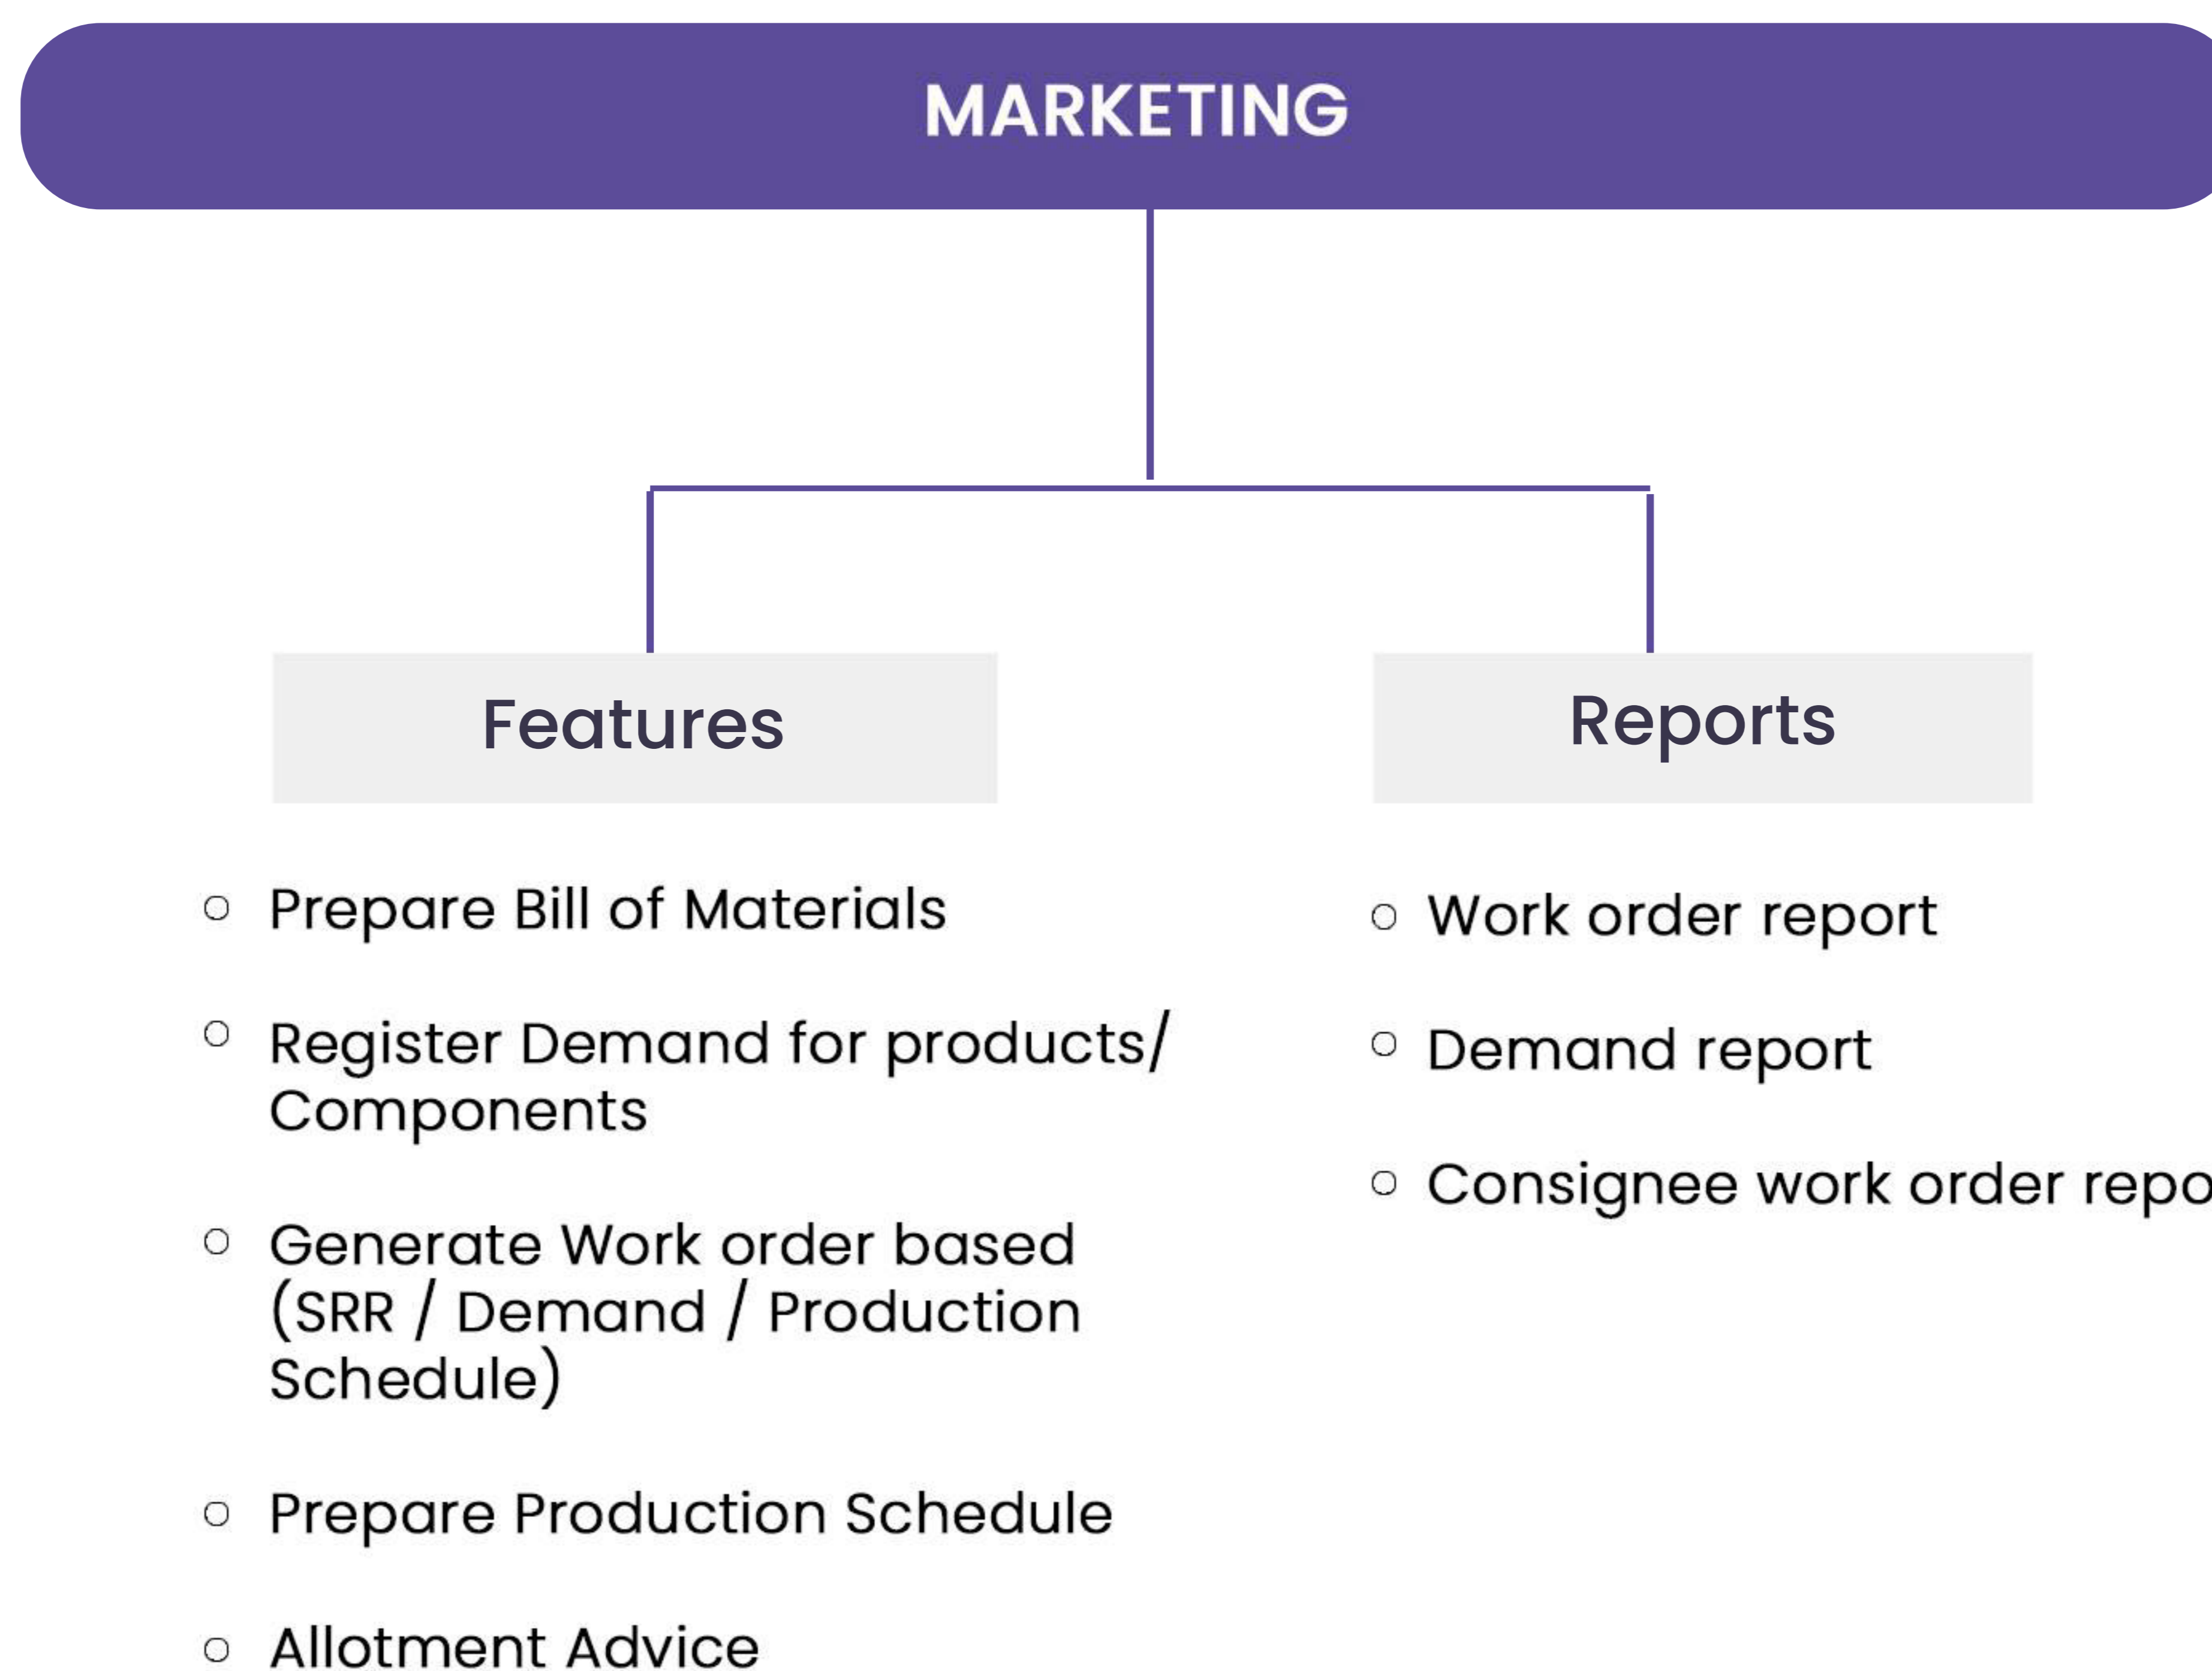

“ The Attendance Report exported from AIMS can be readily imported into IPASS. The reports can be customized to be imported into any third party softwares authorized by the Indian Railways. ”
